

STRIX SYSTEMS

Singapore, 8 March 2005 - Equator One (E1), an emerging leader in infrastructure management solutions, today announced that Strix Systems has deployed E1's MAX Infrastructure Management Suite (MAX) to monitor and manage its IT infrastructure.

Strix System's decision stems from MAX's ability completely manage the infrastructure—providing an all-in-one tool set for proactively monitoring, controlling, and getting the best out of the system of wireless networks.

Strix Systems CEO Bruce Brown said, "We are very pleased with our acquisition of the MAX software. It has given us increased visibility and control of our infrastructure—enhancing our ability to focus on our business growth without increasing our fixed costs or diverting major capital investments from our product development."

Toni Graham, Equator One's VP for Marketing, said that "Strix Systems is an excellent example of a fast growing enterprise taking advantage of the benefits MAX can provide."

Wilfred Wong, Equator One's CEO, agrees. "I am very pleased with the momentum MAX is having in the North American market."

About Strix Systems

A wireless LAN specialist founded in Calabasas, California, Strix Systems Inc. designs, develops and markets wireless network systems that enhance productivity and efficiency by providing users with instant information via continuous secure connections to company networks. Backed by a joint venture of IT firms, Strix Systems specializes in wireless LAN products, covering 802.11a, 802.11b, 802.11g, Ultra-Wide Band, and Bluetooth technologies.

About Equator One

Equator One today stands out as an emerging leader in providing IT infrastructure management solutions to enterprises and next-generation service providers, empowering them to optimize the performance and availability of their mission-critical computing infrastructures. E1's comprehensive suite of solutions is based on an open, distributed and scalable architecture, and provides proactive monitoring, measurement and control of IT resources. E1 products also offer service level agreement management, fault management and network performance management of all applications and systems within a network environment. E1 solutions allow customers to simplify management at all points of network congestion, thus reducing the cost of ongoing maintenance, and delivering high returns on investments, as well as lower total cost of ownership. Headquartered in Singapore, with liaison offices in Taiwan, the United States and India, Equator One (www.equatorone.com) is establishing the US headquarters in San Diego in the near future.
